## Charts and Visuals

## Key Insights Recommendation

- 1. High HbA1c Levels:** A considerable number of patients have HbA1c levels indicating moderate to high risk. Recommendations include targeted interventions and closer monitoring.
- 2. BMI Distribution:** A significant percentage of patients fall into overweight and obese BMI categories. Encourage lifestyle modifications and weight management programs.
- 3. Age and Diabetic Status:** Diabetic patients are distributed across various age ranges, indicating the need for age-specific diabetes management strategies.
- 4. Smoking and Diabetes:** Explore the impact of smoking on diabetes. Consider implementing smoking cessation programs for diabetic patients who smoke.
